Maintain a clear view during endoscopic procedures...

The Reveal® distal attachment cap is designed to facilitate the endoscope’s view during a variety of therapeutic and endoscopic procedures.

The Reveal® distal attachment cap...

- helps avoid ‘red out’ by maintaining a constant distance between the endoscope and mucosa
- aids in flattening folds and maneuvering through difficult turns in the GI tract
- can be used in conjunction with accessories such as snares or needles

side hole allows for constant drainage of fluid

For more information on the Reveal® distal attachment cap, contact US Endoscopy today.
